

EXECUTIVE BRIEFING

Legacy modernization for decision-makers

A concise decision aid for executives and technical leaders.

The central management question

The starting point is not a new technology. It is the protection of critical business processes, data and operational continuity.

Clarify before deciding

- | | |
|---|---|
| • | Verify source code and build reproducibility. |
| • | Identify unsupported components and technical dependencies. |
| • | Make key-person dependencies visible. |
| • | Assess data, interface and operational risks. |

Controlled modernization path

DISCOVER → ASSESS → PLAN → PILOT → MODERNIZE → VALIDATE → SUPPORT

Strategic perspective

A complete rewrite is only one option. Encapsulation, modularization and incremental migration are often safer for business-critical systems.
